Innovac'23

Name of the Event: **'Game of Code'**

Vision: Ever since the advent of technology there is the solution for almost every problem. But technology has also led us to 'Digital Divide'. So, through this event will try to solve real social problems with the theme - 'Technology to Resolve'.

Event Idea: The game of code will be an event of Innovc'23. There will be teams participating in it. The contest goes like this – A newspaper will be given to each team and will be asked to identify the social problem of the society and develop software to resolve it. Problems can be – Mental health (some games can be developed for it), some smart apps can be developed for school education in rural areas, Road accidents alert, a platform to verify news to avoid fake news, an app or platform where small business can get their paperwork done with the government, AI enables an app to manage traffic, a site where citizens can check whether they are eligible for a scheme or not, etc. There can be many other problems. Parameters to judge will be decided by a committee consisting of faculty members, and alumnus.

Venue: Based on the no. of teams participating venue can Barn Hall or Golden Jubilee building, where a proper workspace will be provided for each team with internet access and power supply. There will be refreshment for participants.

Budget: 50K-60K - funding can also be raised through sponsorship apart from college fund.

People Needed: There will be about 30-35 people in different teams to manage event. Whole event will be divided into different subevents and teams will be assigned to every sub-event.

Publicity: Publicity can be done through social media, pasting posters, visiting different campuses. Publicity can also be boasted by making campus ambassador in different college to attract more participation. Short informative videos can be circulated through WhatsApp.
